SPECIFICATIONS

Ensure a high quality terrazzo installation by using National Metal Shapes Divider Strips. National Metal Shapes Divider Strips are both functional and aesthetically pleasing. The strips allow for color separation, localize terrazzo shrinkage, minimize cracks and enhance control of movement due to structural settlement. National Metal Shapes Divider Strips allow architects and flooring designers great flexibility in color and material selection for the terrazzo matrix. Expansion strips should be specified over saw control joints, control cracks and on long runs - in accordance with industry standards.

***Angle** - National Metal Shapes Divider Strips are available in a variety of sizes, shapes and materials. The strip is a solid single material, one-piece construction, thereby eliminating the chance of strip separating or splitting.*

***Materials** - Aluminum, Brass, Zinc, Black PVC (other colors are available), Polyurethane filled expansion joint.*

***Depths** - 1/8", 3/16", 1/4", 5/16", 3/8", 1/2", 3/4", 1 1/4", 1 1/2".*

***Exposed Thickness** - 16 gauge (.050"), 14 gauge, 1/8", 1/4", 3/8", 1/2", 3/4".*

NOTE: Follow all National Terrazzo and Mosaic Association (NTMA) guidelines for setting of divider strips.
